INTRODUCTION

The preliminary results of Census 2011 was extracted from the Census Visitation Records. It must therefore be emphasized that this information is based on preliminary findings from the May 2011 Dominica Population and Housing Census. It is **not** final information and is subject to slight changes after processing of final Census data.

This report also includes census data from 1981 and other demographic trends over the last ten years.

The Central Statistical Office acknowledges the assistance and cooperation of individuals groups, institutions, and government departments in making this Census successful. Much appreciation and thanks are extended to Permanent Secretaries, Heads of Government Departments, the Private Sector, media houses, religious leaders, local government offices, the Cable and Wireless Company, Census Area Supervisors, Census Enumerators and many others who contributed in any way towards this extensive national exercise.

The Central Statistical Office acknowledges the support and contribution of the Caribbean Community (CARICOM) Regional Census Coordinating Unit during Census planning. The United Nations Fund for Population (UNFPA) is also recognized for its several training workshops conducted in preparation for a successful Census.

Chief Statistician

EXPLANATORY NOTES

The following definitions have been used in this report:

1. **CENSUS DAY**
Census day was May 14th, 2011
2. **VISITATION RECORD**
The record of names, addresses and number of persons and dwelling units which was kept by enumerators.
3. **TOTAL POPULATION**
The result of the comprehensive count of persons found at various locations throughout the Commonwealth of Dominica. This included permanent residents who were temporarily away from Dominica for less than six months, persons who could not be contacted and refusals. The count for these categories is obtained from closest neighbors, relatives or friends
4. **NON-INSTITUTIONAL POPULATION**
The non-institutional population is the number of persons who lived in private residences on Census Day.
5. **INSTITUTION**
An institution is defined as living quarters in which the occupants live collectively for disciplinary, health, educational, religious, military, work or other reasons. This includes hotels, guesthouses, police stations, fire stations, convents, presbyteries, prisons and homes for the aged, hospitals.
6. **INSTITUTIONAL POPULATION**
The institutional population is the number of persons who permanently reside in institutions or who have been residing in an institution for the six months before census day.
7. **HOUSEHOLD**
A private household consists of one or more persons living together (i.e. sleeping most nights of a week 4 out of 7) and sharing at least one daily meal.
8. **DWELLING UNIT**
A dwelling unit is any building or separate and independent part of a building in which a person or group of persons is living at the time of the census enumeration. It must have direct access from the street or common landing, staircase, passage or gallery where occupants can enter or leave without passing through anybody else's living quarters.

9. CLOSED DWELLING UNIT

A closed dwelling unit is a dwelling unit which is occupied, but during the enumeration period, the occupants are temporarily away, that is away for less than six (6) months.

10. VACANT DWELLING UNIT

If a dwelling unit is habitable but no one is living there at the time of enumeration it is to be considered vacant. A habitable dwelling unit whose residents are away for more than six months is also to be considered vacant.

VALIDATION

Field consistency checks for complete coverage were conducted in Morne Prosper, Salisbury, Coulibistrie, St. Joseph, Yam Piece East, Simon Bolivar Housing Area, Goodwill, Marigot, Wesley, Fond Cole, Gallion and Soufriere. The validation process was conducted with a Census team canvassing these selected enumeration districts and revisiting each household to confirm enumeration. The visitation record was also taken to the field during the validation process and inquiries about previous enumeration was asked of each household member (above the age of 15) to avoid double counting. In the event households were not enumerated additional checks were performed in the visitation record before complete enumeration. Population validation were conducted in areas with challenging terrain, areas registering sharp population loss, and significant population gain that could not be validated with other socio-economic factors.

RESULTS OF VALIDATION PROCESS

Following the completion of the validation process, findings recorded some enumeration district boundary overlap. This was corrected and the district population adjusted accordingly. In some areas, the previous information collected was actually correct. However in some instances a few households were not yet enumerated as a result of difficulty of contact. For the latter, most were one-member households as registered in the collected information from the field validation process. The appropriate steps were taken and the population of these one-member households recorded.

Further validation of all enumeration districts was conducted by a consistency check of the number of buildings recorded on individual enumeration district map and the visitation record. That is the number of buildings recorded on the visitation record must be equal to (or in some cases more than) that of each individual enumeration district map. In other words all buildings on each map must be accounted for on the visitation record. Where inconsistencies were identified, the enumeration district was re-visited to correct or validate as necessary.

REVIEW

The total population of Dominica as of midnight May 14, 2011 numbered 71,293. The total population comprises 36,411 males and 34,882 registering 1,529 more males than females and a sex ratio of 104.4. This compares to 1,141 more males in the last Census and a sex ratio of 103.2.

The total population also represented a net decrease of 434 or a slight 0.6 percent decline over the 2001 head count and a fall below the 2010 mid -year population estimate of 72,729.

FOREIGN-BORN POPULATION

Haitian-born nationals have become the main migrant population in Dominica. According to the Census head count, the Haitian-born population numbered 1,054 with 608(57.7 percent) males and 446 (42.3 percent) females, altogether accounting for 1.5 percent of the population.

BIRTHS AND DEATHS 2001 TO 2010 (Over the decade or last ten years)

From 2001 to 2010 a total of 10,207 births were added to the population (Table 1, page 6), falling 4,696 births below the previous decade. These 5,091 females and 5,116 males (births), recorded a sex ratio of 100.5, an almost 1:1 ratio. During the same period 5,502 persons died, almost stable over the previous decade (with 5,581 deaths). Of these 5,502 deaths, 2,606 were females and 2,896 males.

Over the decade, total births continued to register steady decreases, recording a significant 31.5 percent decline in two decennial periods. Natural increase (births minus deaths) reflected 4,705 or a net addition of 4,705 persons, to the population through natural demographic process. This trend again registered a sharp 49.5 percent fall over the last decade. The 2001 end of year population was 70,401; adding natural increase, the total estimated population currently would be 75,106. However, other demographic processes or more precisely demographic forces affected the expected population.

NET IMPLIED MIGRATION

The addition of the decade's natural increase of 4,705 persons to the 2001 end of year population means that the population could have reached 75,106. This unattained level means other demographic forces prevailed over natural increase processes. Thus a population outflow was in operation over the ten-year transition. This net implied outflow or migration seemed to have taken out 3,813 approximately 4,000 persons out of the population reflecting an average outflow of 400 persons per year.

Dominica's highest number of non-institutional population occurred in 1981 when 73,795 was recorded. From the following three censuses, the population has not exceeded this number.

POPULATION CHANGE

Population Gain

In comparison to the 2001 Population Census and according to the 2011 Census preliminary results, only four parishes seemed to have gained population. St. Paul recorded the largest increase, 1,176; within the parish of St. Paul, the following communities recorded population increases as follows: Jimmit/Warner increased by 537 persons, Canefield/Morne Daniel, 521; Mahaut, 286; Massacre, 181 and interestingly Cockrane, 105.

The parish of St George added 709 with the following main area increases: CoptHall/ Wotton Waven, 307; Stock Farm/ Yam Piece/ Tarish Pit East, 274; Trafalgar/Shawford, 157; Loubiere/Fond Baron, 160 and Eggleston, 106.

The parish of St. John gained 632 with the town of Portsmouth, Picard and Glanvilla recording an increase of 557 persons. The parish of St. Luke increased by 88.

Population Loss

Other movements and demographic forces seemed to have countered these moderate increases resulting in a net population loss. As in the 2001 Census the largest population decrease was again recorded in St. Andrew with a loss of 1,024 (in the 2001 Census the loss was 645). The community of Wesley registered a loss of 394 persons followed by Marigot with 265. It is interesting to note that the parish of St. Andrew having registered a significant percentage in vacant buildings also reflected the largest population loss. The parish of St. Patrick followed with a loss of 871, almost doubling the 2001 loss of 452 with the Grand Bay Area recording a loss of 329 persons followed by Montine/Tete Morne with 126.

The parish of St. David recorded a population loss of 746 with Castle Bruce registering a loss of 252 persons followed by Good Hope/Dix-Pas with 114 and Grand Fond, 106. The parish of St. Joseph registered 314, with the village of St. Joseph registering a population loss of 283. Population decreases were also recorded in St. Peter, 91 and St. Mark, 62.

Population Distribution

The population distribution by parish or population zone indicates that the Parish of St. George (which includes the city of Roseau) records 30.0 percent (up from 28%), St. Paul registers 14.0 percent (up from 12 percent); St. John 9.0 percent (up from 8.0 percent); St. Joseph remained relatively stable at 8.0 percent.

St. Andrew records 13.0 percent (down from 15%), St. Patrick, 11.0 percent (down from 12%), St. David, 8.0 percent (from 10.0 percent). St. Mark, St. Luke and St. Peter remained relatively stable, ranging from 2.0 to 3.0 percent.

The largest communities are Roseau with 14,725 persons, Portsmouth (including Picard, Glanvilla and Lagoon) with 5,198, Canefield 3,324; Grand Bay (including Hagley and Ravine Banane), 2,612 Marigot, 2,411; Salisbury, 2,174; Carib Territory, 2,145; Mahaut, 2,113; St. Joseph 1,746; Pointe Mitchel, 1664; Massacre, 1552 and Wesley 1,362. Other communities,

which have already reached 1,000 and more persons, are as follows: La Plaine, Castle Bruce, Calibishie, Wallhouse/Castle Comfort and Loubiere/Fond Baron.

HOUSEHOLDS

The total number of households in the 2011 Census recorded 26,085 in comparison to 24,041 in the 2001 Census. This represented an 8.5 percent increase in comparison to 19.2 % increase in households over the previous Census. Currently the average number of persons per household is 2.7 down from 3.0 in 2001. The Parish of St. George accounted for 28.3 percent of all households, while St. Paul followed with 13.3; St. Andrew ,13.2; St. Patrick registered 10.9 and St. John (where the second town is located) accounted for 10.6 percent.

VACANT BUILDINGS

The Parish of St. John accounted for 21.8 percent of vacant buildings. These are buildings that were not occupied during Census Enumeration or that residents were away for more than six months. St. George followed with 16.2 percent and St. Andrew 13.4. St. Patrick and St. Joseph registered 12.2 and 10.8 percent respectively. It is interesting to note that the parish of St. Andrew having registered a significant percentage in vacant buildings also reflected the largest population loss.

COVERAGE

The Census achieved a 92.5 percent coverage with respect to actively occupied dwellings (that is excluding closed and vacant dwelling units) with the remaining 7.5 percent non-coverage recording 3.1 percent as refusals and 4.4 as no contacts. The majority of no contacts were one-member households. However a head count was conducted for all households in these categories and the individual household population recorded in the visitation record and included in the total population.

TABLE 1. REVIEW OF DEMOGRAPHIC DATA 1991 to 2010

YEAR	LIVE BIRTHS	DEATHS	NATURAL INCREASE	YEAR	LIVE BIRTHS	DEATHS	NATURAL INCREASE
2001	1,216	510	706	1991	1,712	518	1,194
