6	Percentage Share of GDP by Sector in Constant Prices 2011.....	43

Preface

This is the first comprehensive Production and Energy Statistics Report compiled on a national level. The Report aims to provide a series on production and energy statistics along with other related social and economic indicators.

This report should be considered as introductory, as wider data coverage will be presented in subsequent editions. The Production and Energy Statistics Report will be published annually.

The compilation of this report is dependent on information provided by several relatively small producers. The data presented in this report may begin from different time periods, and therefore may limit, to some extent, comparative analysis for earlier years.

The information presented will prove useful for analysis of the production sector in Dominica and to assess the movement of this sector and its contribution to Dominica's Gross Domestic Product. Any suggestions that can assist in enhancing future reports will be welcomed.

The Central Statistics Office expresses appreciation for the assistance and cooperation from data providers.

Prayma Carrette
Chief Statistician

July 2012

The Commonwealth of Dominica

General Background

The Commonwealth of Dominica is the most northern and largest of the Eastern Caribbean's Windward Islands situated between Latitude 15 20 minutes North and Longitude 61 22 minutes West. It lies between the French islands of Guadeloupe to the north and Martinique to the south. The island is 751 square kilometers (289.5sq miles). Dominica's climate is classified as humid tropical marine, characterized by little seasonal variation between the wet and dry season. Its pronounced high rainfall during the wet season contributes to its lush vegetation.

Dominica's relatively undisturbed and rugged landscape, extensive forest, pristine fresh and sea water and overall ecological system have contributed to Dominica's being acclaimed as "the Nature Island of the Caribbean".

Political and Economic Situation

Dominica attained political independence from England in 1978 and retains a political organization based on the British Parliament multi-party democracy. Dominica inherited its official language, English. However, partly due to historical influences, the majority of the population speaks a patois "kweyol" composing of African and French linguistic structures.

Traditionally, Dominica's economy has been based on agriculture, with bananas as the principal export crop. Though over time the dominance of the agricultural sector has been on the decline, it remains an important mainstay of the Dominican economy and employed 22.20 percent of the work force in 2005 (2005 Labor Force Survey).

Recent international and regional events have contributed to the declining dominance of agriculture, in particular the cultivation of bananas. Agriculture (mainly crops other than banana) contributed 9.66 percent of Gross Domestic Product in 2000 and 8.31 percent in 2010. Economically, Dominica pursues and sustains a free-market and liberal economy. During the 2011 period the economy registered a growth rate of 1.91 percent, with percentage increases in the Agriculture Livestock & Forestry Sector, 5.06 and Construction Sector, 4.45.

The Annual Consumer Price Index recorded a 1.82 percent increase in 2011.

SUMMARY

Traditionally Dominica has been heavily dependent on its Agricultural sector (including fishing), particularly the growing of bananas. The Agriculture Industry accounted for 11.17 percent of Gross Domestic Product (GDP) in 2009. However a gradual shift has been noted in terms of the sector's percentage contribution to the overall GDP. The Agricultural Sector contributed an average of 12.90 percent of GDP over the period 2002 to 2006, compared to an 11.24 percent over the period 2007 to 2011.

The levels of banana production from 2000 to 2010 have steadily decreased, registering the sharpest decrease of 33.74 percent over the period 2000 to 2001 and continuing on a steady decline until 2003. Attempts of recovery were recorded from 2004 to 2006 but production was again interrupted by the passage of Hurricane Dean in 2007. Levels in 2010 compared to 2000 recorded a significant drop of 62.26 percent. Factors contributing to such fluctuations are adverse weather conditions, crop infestation and a change in trade agreements from major export markets.

Fish production from 2000 to 2010 registered mixed movements in terms of fish landed. The largest decrease, 23.63 percent was recorded in 2004 over 2003. However, in 2007 production recorded a sharp increase of 25.83 percent over the previous year. The record year was 2001 when production peaked at 902.09 tonnes.

The Manufacturing sector has evolved over the years producing several varieties, ranging from agro-based commodities, such as soaps, fruit juices and bay oil to more chemical-based products such as detergents, insecticides and windows and doors etc. However, during the period 2002 to 2010, the Manufacturing sector recorded mixed movements in the levels of production. Soap production registered an unstable trend; the volume (quantity) of soap produced in 2011 compared to that of 2002 recorded a sharp drop of 44.77 percent. This sector has also been affected by the discontinuation of one main product-line (from 2007), which resulted in the termination of production of a variety of household and personal products.

Although the production of soaps have been challenged by operational restructuring and fluctuations in demand, production has maintained relative success resulting in soap exports accounting for an average of 47.70 percent of the value of domestic exports in the manufactured and quarried products category, from 2002 to 2010, peaking at 63.75 percent in 2010.

Source: Dominica Electricity Services

Note: (1) The significant decline in general lighting from 2002 reflects the company's redistribution of general lighting to the commercial sector.

(2)The sharp increases of the number of Hotels Consumers from 2003 to 2010 represent continued installations of individual electricity consumption meters

(Pay As You Go) particularly to accommodate foreign students renting apartments at Hotels and Cottages. The significant decline in 2011 is due to reclassification of the majority of these units into the Domestic Consumers category

Table 14.1 Per Capita Electricity Use/day 2001 – 2011

... data not available

Note: (1) Total consumption from 2004 to 2006 is revised.

(2) Number of Industrial and commercial metered establishment are combined for 2004 and 2005

(3) Consumption for industrial and commercial establishment is combined for 2010

(4) Sharp increase in number of metered commercial establishments from 2004 followed new meter system and policy measures in differentiating commercial and household units

(5) Number of standpipe revised from 2007

(6) Consumption by standpipe is estimated for 2007 to 2010
