5 Percentage Contribution of GDP by Economic Activity in Constant Prices 2013.....	43
6 Percentage Share of GDP by Sector in Constant Prices 2013.....	44

Preface

This is the second comprehensive Production and Energy Statistics Report compiled on a national level. The Report provides a series on production and energy statistics along with other related social and economic indicators.

The information presented will prove useful for analysis of the production sector in Dominica and to assess the movement of this sector and its contribution to Dominica's Gross Domestic Product. Any suggestions that can assist in enhancing future reports will be welcomed.

The Central Statistics Office expresses appreciation for the assistance and cooperation from data providers.

Prayma Carrette
Chief Statistician

The Commonwealth of Dominica

Description and General Background

The Commonwealth of Dominica is the most northern and largest of the Eastern Caribbean's Windward Islands, situated between Latitude 15° 20 minutes North and Longitude 61° 22 minutes West. It lies between the French islands of Guadeloupe to the north and Martinique to the south. The island is 751 square kilometers (289.5sq miles). Dominica's climate is classified a humid tropical marine, characterized by little seasonal variation between the wet and dry season. Its pronounced high rainfall during the wet season contributes to its lush vegetation.

The island's topography is rugged with steep, luxuriant rain forest mountains, deep river-incised valleys and tree-covered hills that produce and sustain pristine rivers, perennial streams and tumbling mountain waterfalls. The island has great diversity of flora and fauna. The Morne Trois Pitons National Park (incorporating the central mountain range) is inscribed on the United Nations World Heritage List since 1998, based on the criteria of Outstanding Universal Value to Mankind, its natural aesthetic, rich bio-diversity and irreplaceable contribution to the understanding of science and natural landscape phenomena.

Dominica's relatively undisturbed and rugged landscape, extensive forest, pristine fresh and sea water and overall ecological system have contributed to Dominica's being acclaimed as "the Nature Island of the Caribbean". This label has impacted favorably in positioning Dominica's global choices as a tourist destination for nature lovers and environmental adventure seekers. The island is currently promoted and is in its advancing stage as an eco-tourist destination.

The island is subdivided into ten parishes or population zones with capital city Roseau, located within the parish of St. George in the south-west. The total population registered 70,739 with the city of Roseau recording a non-institutional population of 14,725 in the 2011 Population and Housing Census. The population comprises mainly people of African descent, 84.7; an 8.7 percent mixed race population and 3.7 percent of indigenous Kalinago people, the survivors of the original or first people of the Caribbean. The Kalinago occupy a demarcated area called the Kalinago Territory, on the northeast of Dominica.

Cruise ships call regularly registering a record 516,820 passengers in 2010. Visitors increased by 4.2 percent from 2004 to 2014, reaching a total arrival of 83,455 in 2014. The three major markets are the Caribbean accounting for 51.5 percent of visitors, United States of America, 24.1 percent and Europe 18.0.

Political and Economic Situation

Dominica attained political independence from England in 1978 and retains a political organization based on the British Parliament multi-party democracy. Dominica inherited its official language, English. However, partly due to historical influences, the majority of the population speaks a patois "kweyol" composed of French linguistic structures.

Traditionally, Dominica's economy has been based on agriculture. However, global and regional events have contributed to the declining dominance of agriculture in particular the cultivation of bananas. In recent times, the Wholesale and Retail Trade and Transport, Storage and Communication sectors have emerged as the leading industries accounting for 14.80 and 14.26 percent respectively, of Gross Domestic Product (GDP) in 2014. Agriculture (mainly non-banana) contributed 12.12 percent of GDP in 2014. Education, mainly Private Education (off-shore) accounted for 10.73 and Real Estate, Renting and Business Activities, 10.08 percent. Economically, Dominica pursues and sustains a free-market and liberal economy. During the 2014 period the economy registered an estimated growth rate of 3.42 percent. The Fishing industry recorded sharp growth of 38.73 percent following a slump in the sector. Hotels and Restaurant grew 12.67 percent; Public Administration, 10.67; Construction, 9.24 and Wholesale and Retail Trade, 4.32. The All Items Consumer Price Index recorded a 0.77 percent increase in 2014.

SUMMARY

Traditionally Dominica has been heavily dependent on its Agricultural sector (including fishing), particularly the growing of bananas. The Agriculture Industry accounted for 11.76 percent of Gross Domestic Product (GDP) in 2009. However, in recent times a gradual shift has been noted in terms of the sector's percentage contribution to the overall GDP. The Wholesale and Retail Trade *and* Transport, Storage and Communication sectors have emerged as the leading industries accounting for 14.80 and 14.26 percent respectively, of Gross Domestic Product (GDP) in 2014. Agriculture (mainly non-banana) contributed 12.12 percent of GDP in 2014.

The levels of banana production from the period 2001 to 2014 recorded fluctuating trends registering a significant 54.6 percent fall in production (over the period). Consequently revenues registered a sharp 35.2 percent decrease. Marginal signs of recovery were noted in some periods, registering the sharpest increase, 29.30 percent in production in 2008. Attempts of recovery were recorded from 2004 to 2006 but production was again interrupted by the passage of Hurricane Dean in 2007. Factors contributing to such fluctuations are adverse weather conditions, crop infestation and a change in trade agreements from major export markets.

Fish production from 2002 to 2014 registered mixed movements in terms of fish landed. The largest decrease, 23.63 percent was recorded in 2004 over 2003. However, in 2007 production recorded a sharp increase of 25.69 percent over the previous year. The record year was 2007 when production peaked at 817.39 tonnes. In 2014 production recorded a significant 38.6 percent growth; consequently revenues registered a notable 38.73 percent increase.

The Manufacturing sector has evolved over the years producing several varieties, ranging from agro-based commodities, such as soaps, fruit juices and bay oil to more chemical-based products such as detergents, insecticides and windows and doors etc. However, during the period 2005 to 2014, the Manufacturing sector recorded mixed movements in the levels of production. Soap production recorded a 2.93 percent drop in 2014 following a 3.85 percent increase in 2013. This sub-sector has been affected by the discontinuation of one main product-line (from 2007), which resulted in the termination of production of a variety of household and personal products.

Although the production of soaps have been faced with operational restructuring and fluctuations in demand, production has maintained relative success resulting in soap exports accounting for an estimated 36.0 percent of the value of domestic export in 2014.
