## PREFACE

The Social Indicators and Millennium Development Goal is the joint presentation of United Nations(UN) and Caribbean Community Secretariat (CARICOM) Indicators on Population and Family, Poverty, Education, Health, Environment, Economy, Employment, Labor Force, Information and Communications, Decision-making, and Crime.

This is the first national report of the MDG. The data mainly covers the periods 1998 to 2003 and includes the census periods 1991 and 2001, and other Household Surveys from 1997. A brief analysis precedes each set of indicators. Recommendations are presented based on data trends and appropriate and relevant targets, since Dominica has long achieved some of the MDG recommended targets.

The MDGs Goals and Targets are integrated into the country's medium term Growth and Social Protection Strategy (GSPS). The GSPS has at its core, the attainment of sustainable economic growth with one of its main focus, the reduction of poverty. These core objectives are based on the premise that growth (especially with a poverty alleviation focus) is needed if poverty is to be reduced on a sustainable basis. The GSPS therefore, at its core, speaks to the first goal of the MDGs - that of eradicating extreme poverty and hunger - and contains within its priority actions, the means to meeting the targets.

The will to attain the goals and targets of the MDGs is also expressed in specific direct actions: the preparation and implementation of the strategic plan for HIV/AIDS 20032007 and setting up the National HIV/AIDS Unit; a fully functional Environment Coordinating Unit (ECU) which serves as the coordinating, facilitating, administering and collaborating body for all environmental and sustainable development management programmes, projects and activities. These activities were possible, consequent to the assistance received from regional and international partners.

This first report is an attempt at capturing where Dominica has reached and actions needed in terms of the attainment of the MDG Goals and Targets.

July 2006

## Dominica

## Social Indicators Millennium Development Goals (SIMDG)

## Introduction

In September 2000 world leaders adopted the Millennium Declaration of the United Nations Headquarters in New York. The Millennium Development Goals (MDG) for improving human conditions by 2015 are derived from the Millennium Declaration. The MDG broadly embraces eight goals and eighteen targets. The MDGs are universal human development parameters applied to all countries with membership in the United Nations. The goals apply to every country irrespective of their level of development.

On May 30, 2003 an MDG National Committee comprising nine Government departments, representatives of the private sector, three international institutions and one statutory organization was established for Dominica. One of the main objective of the committee is to complete the indicators (data) set for the MDG program and to document definitions and methodologies. The formation of this Committee was initiated by the Caribbean Community (CARICOM) Secretariat, Guyana with support from the United Nations (UN).

Social Indicators and Millennium Development Goals (SIMDG)
The SIMDG is the joint presentation of UN and CARICOM Indicators on Population and Family, Poverty, Education, Health, Environment, Economy, Employment, Labor Force, Information and Communications, Decision-making, and Crime. These indicators have been completed on available information. In cases where data is unavailable, departments/institutions were advised to begin collecting data by the prescribed format from the end of 2002.

## Formation of Core Monitoring Committee

A National Core Monitoring Committee was formally established on May 20, 2005. A nine member committee derived from the wider National Committee form a core technical working group to monitor, analyse and make recommendations on the MDG Indicators.

Analysis and recommendation are performed and approved by respective ministries and departments in collaboration with the Core Committee. Following analysis and recommendation government officials, policy makers and other stake holders are informed of the existing trends and recommendations on the relative MDG Indicators.

## Institutional Support

The Central Statistics Office, Ministry of Finance and Planning functions as the Central Secretariat for the MDG and reviews (and compiles some indicators)completed MDG indicators. The information is disseminated to the National and Core Committee for discussion or review.

## Sustainability

In addition to the completion of the indicators by respective departments, four officers of the Central Statistical Office are knowledgeable of the programme while two are directly involved in monitoring and ensuring the completion of these indicators at the end of the stipulated period. The office of the Prime Minister has pledged full support for and involvement in the MDG Program. A cabinet paper was presented for the MDG program.

## Data Validation

Review and consistency checks on all datasets are performed (in the Central Statistical Office) and compared with published data or current information to ensure consistency and reliability. Where inconsistencies occur data is checked, revised or corrected from source. It is worth noting that compiling the MDG facilitates and supports the process of data reliability and accuracy in other related data sets.

## Time Scheduled/Release Dates

The MDG's will be updated yearly with emphasis on accurate reporting and the completion of data gaps. The annual MDG updates will be released on the $30^{\text {th }}$ April at 12:00 noon of each year.

## Dissemination

Following consistency checks the data is disseminated to national, regional and international organizations, interested parties and other users via electronic mail, compact disc, or hard copy.

## Linkages to National Priority Programmes

MDG recommendations will be viewed vis-à-vis the annual national budget process and the Growth and Social Protection Strategy Program. Provision for integration of recommended programmes will be addressed in annual national budget.

## Millennium Development Goals (MDGs)

| Goals and Targets from the Millennium Declaration | Indicators for monitoring program |
| :---: | :---: |
| Goal 1: Eradicate extreme poverty and hunger <br> Target 1: Halve, between 1990 and 2015, the proportion of of people whose income is less than one dollar a day <br> Target 2: Halve, between 1990 and 2015, the proportion of people who suffer from hunger | 1. Proportion of population below $\$ 1$ (PPP) per day <br> 2. Poverty gap ratio (incidence $x$ depth of poverty) <br> 3. Share of poorest quintile in national consumption <br> 4. Prevalence of underweight children under-five years of age <br> 5. Proportion of population below minimum level of dietary energy consumption |
| Goal 2: Achieve universal primary education <br> Target 3: Ensure that, by 2015, children everywhere, boys and girls alike, will be able to complete a full course of primary schooling | 6. Net enrolment ratio in primary education <br> 7a. Proportion of pupils starting grade 1 who reach grade 5 <br> 7b. Primary completion rate <br> 8. Literacy rate of $15-24$ year olds |
| Goal 3: Promote gender equality and empower women <br> Target 4: Eliminate gender disparity in primary and secondary education, preferably by 2005, and in all levels education no later than 2015. | 9.a. Ratio of girls to boys in primary education <br> 9.b. Ratio of girls to boys in secondary education <br> 9c. Ratio of girls to boys in tertiary education <br> 10. Ratio of literate women to men, 15-24 years old <br> 11. Share of women in wage employment in the nonagricultural sector <br> 12. Proportion of seats held by women in national parliament |
| Goal 4: Reduce child mortality <br> Target 5: Reduce by two-thirds, between 1990 and 2015, the under-five mortality rate. | 13. Under-five mortality rate <br> 14. Infant mortality rate <br> 15. Proportion of 1 year-old children immunized against measles |

| Goal 5: Improve maternal health <br> Target 6: Reduce by three-quarters, between 1990 and 2015, the maternal mortality ratio | 16. Maternal mortality ratio <br> 17. Proportion of births attended by skilled health personnel |
| :---: | :---: |
| Goal 6: Combat HIV/AIDS, Malaria and other diseases | 18. HIV prevalence among pregnant women aged $15-24$ years <br> 19. Condom use rate of the contraceptive prevalence rate (a) <br> 19.a. Condom use at last high-risk sex |
| Target 7: Have halted by 2015 and begun to reverse the spread of HIV/AIDS | 19.b. Percentage of population aged $15-24$ years with comprehensive correct knowledge of HIV/AIDS(b) 19.c. Contraceptive prevalence rate |
| Target 8: Have halted by 2015 and begun to reverse the incidence of malaria and other major diseases | 20. Ratio of school attendance of orphans to school attendance of non-orphans aged $10-14$ years |
|  | 21.a. Malaria prevalence, notified cases per 100,000 Population |
|  | 21b. Malaria death rate per 100,000, ages 0-4 <br> 22a. Proportion of population in malaria-risk areas using effective malaria prevention measures( c) |
|  | 22b. Proportion of population in malaria-risk areas using effective malaria treatment measures. |
|  | 23.a. Tuberculosis incidence rates. <br> 23b. Tuberculosis prevalence rate per 100,000 population |
|  | 23c. Death rate associated with tuberculosis per 100,000 population. |
|  | 24a. Proportion of tuberculosis cases detected under DOTS (internationally recommended TB control Strategy) |
|  | 24.b. Proportion of tuberculosis cases successfully treated under DOTS (internationally recommended TB control strategy) |
| Goal 7: Ensure environmental sustainability |  |
| Target 9: Integrate the principles of sustainable development into country policies and programmes and reverse the loss of environmental resources | 25. Proportion of land area covered by forest <br> 26. Ratio of area protected to maintain biological diversity to surface area <br> 27. Energy use per $\$ 1$ GDP (PPP) <br> 28b. Consumption of ozone-depleting CFCs (ODP tons) <br> 29. Proportion of population using solid fuels |
| Target 10: Halve, by 2015, the proportion of people without sustainable access to safe drinking water and basic sanitation | 30.a. Proportion of population with sustainable access to an improved water source, urban |
|  | 30.b Proportion of population with sustainable access to an improved water source, rural |
|  | 31.a. Proportion of population with access to improved sanitation, urban |
|  | 31.b. Proportion of population with access to improved sanitation, rural |

Target 11: By 2020, to have achieved a significant improvement in the lives of at least 100 in the million slum dwellers

Goal 8: Develop a global partnership for development

Target 12: Develop further an open, rule-based, predictable, non-discriminatory trading and financial system

Includes a commitment to good governance, development and poverty reduction - both nationally and internationally

Target 13: Address the special needs of the least developed countries

Includes: tariff and quota free access for the least developed countries' exports; enhanced programme of debt relief for heavily Indebted poor countries (HIPC) and cancellation of official bilateral debt; and more generous ODA for countries committed to poverty reduction

Target 14: Address the special needs of landlocked developing Countries and small island developing States (through the Programme of Action for the Sustainable Development of Small Island Development States and the outcome of the twentysecond special session of the General Assembly)

Table 15: Deal comprehensively with the debt problems of developing countries through national and international measures in order to make debt sustainable in the long term
32. Proportion of households with access to secure tenure

Some of the indicators listed below are monitored separately for the least developed countries (LDCs), Africa, landlocked developing countries and small island developing States. Official development assistance (ODA)
33.a. ODA, net, as a percentage of OECD/DAC donors' GNI
33.b. ODA to LDCss, net, as a percentage of OECD/DAC donors' gross national income.
34. Proportion of total ODA to basic social services
35. Proportion of bilateral official development assistance of OECD/DAC donors that is united
36. ODA received in landlocked developing countries as a proportion of their gross national incomes
37. ODA received in small island developing States as a proportion of their gross national incomes

Market access
38. Proportion of total developed imports (by value and excluding arms) from developing countries and least developed countries, admitted free of duty
39. Average tariffs imposed by developed countries on agricultural products and textiles and clothing from developing countries
40. Agricultural support estimate of OECD as a percentage of their gross domestic product
41. Proportion of ODA provided to help build trade capacity

Debt sustainabllity
42. Total number of countries that have reached their HIPC decision points and number that have reached their HIPC completion points (cumulative)
43. Debt relief committed under HIPC initiative
44. Debt service as a percentage of exports of goods and services

Target 16: In cooperation with developing countries, develop and implement strategies for decent and productive work for youth

Target 17: In cooperation with pharmaceutical companies, provide access to affordable essential drugs in developing countries

Table 18: In cooperation with the Private sector, make available the benefits of new technologies, especially information and communications
45. Unemployment rate of young people aged $15-24$ years each sex and total
46. Proportion of population with access to affordable essential drugs on a sustainable basis
47.a. Telephone lines per 100 population
47.b. Cellular subscribers per 100 population

48a. Personal computers in use per 100 population
48.b. Internet users per 100 population

Adapted from Assessment of countries capacity on the basis of country level data stored in the UNSD database Indicator Legend

## Current Assessment of Targets

## Goal 1 Eradicate Extreme Poverty and Hunger

Assessment
Target 1: Current Poverty Level is $39 \%$ (headcount as defined by the national poverty line based on the expenditure approach and not by the $\$ 1$ day concept) and is expected to be reduced to $15 \%$ by 2015 .

Target 2: Although data is not available for proportion of people who suffer from hunger, the percentage may be negligible (from general perception) for this group of persons. However to ensure the non-occurrence of this incidence, it is proposed that a module indicating availability of basic meals and other related indicators is attached to continuous surveys.

## Goal 2: Achieve Universal Primary Education

Target 3: Dominica has already achieved universal primary and secondary education. The latter became effective September 2005. However, quality of education is continuously assessed through the Primary School Assessment for Grades 2 \& 4. The Secondary School Assessment is being examined.

## Goal 3: Promote Gender Equality and Empower Women

Target 4: Already Achieved
Both gender, boys and girls alike have equal access to all levels of education.

## Goal 4: Reduce child mortality

Target 5: The under five mortality rate is 3.75 per 1000 live births (2003). The lowest recorded over the last six years 2.36 (2002) can be achieved or even further reduced.

Goal 5: Improve Maternal Health
Target 6: Achieved 0.00 . The Maternal Mortality Rate is 0.00 (2003)
Goal 6: Combat HIV/AIDS, Malaria and other diseases
Target 7: The cumulative incidence of HIV has increased by 42.4\% over the 1998-2002 period with AIDS cases following a similar trend, increasing by $26.1 \%$. The occurrence of AIDS records a higher percentage among men $74.8 \%$ in 1998
and $72.7 \%$ in 2002. However this reveals that although males account for the highest occurrence, the proportion of female living with AIDS has increased. The Ministry of Health, AIDS Unit is fervently providing care and treatment to people living with HIV and AIDS (plwha). In addition the Ministry is developing a monitoring and evaluation plan. A referral system and contact tracing have already been established. With the increase in prevention education and following the UNGASS and Global Fund Indicators, the Ministry of Health hopes to realize a decrease in the number of new cases overtime.

## Target 8: Achieved <br> Dominica has virtually eradicated the incidence of malaria 0.00 (2003) and Tuberculosis 0.4 (2003) percentage of all deaths.

## Goal 7: Ensure environmental sustainability

Target 9: Dominica is working towards the process of integrating the principles of sustainable development into country policies and programmes and reverse the loss of environmental resources.

Target 10: Dominica reduced the level of households without sustainable access to safe drinking water from $7.9 \%$ (1991) to $4.5 \%$ (2001) and is targeting sustainable access to safe drinking water for all by 2010.

Dominica has reduced the level of households without sustainable access to basic sanitation from $25.5 \%$ (1991) to $16.0 \%$ (2001) and is targeting sustainable access to basic sanitation for all by 2015.

Target 11: Slum dwellers are non-existent. However, the percentage of squatting (term commonly referred to households occupying state or abandoned lands) has slightly increased from 0.4 percent (1991) to 0.6 percent (2001). Governments' policy is "to give focus to the issue of housing to work towards enhanced access to adequate shelter for all segments of our population. $\qquad$ making for a total of 250 units over the next five years". (Government's Budget Address 2005/2006)

## Goal 8: Develop a global partnership for Development

Targets 12-18:These targets are being examined by the respective agencies and progress will be reported and assessed by end 2006. Dominica is keeping apace with technology and communication. A massive increase in the use of internet and cellular phones began in 2002 . In 2004 the number of cellular subscribers reached 67 per 100 population, recording a 240.68 percent increase in subscribers over the last year, 2003.

## MDG 2006 National Report

This is the first national report of the MDG. The report presents Indicators on Population and Family, Poverty, Education, Health, Environment, Economy, Employment/Labor Force, Information and Communication, Decision-Making and Crime. The data mainly covers the period 1991, 1997 and 1998 to 2003.

## Definitions and Methodologies

Definitions and methodologies are referred to in table footnotes.

## Localizing the Millennium Development Goals

Following the recommended targets of the MDG and the measurement of achievements, an additional component is adopted in presenting indicators that are most relevant in the context of national socio-economic development - localizing. Localizing the MDG not only involves the popularization of the Goals at all levels of the society but the process of adapting the targets to local realities with an assessment of the data's relevance to the country's situation. In Dominica for example, target 3 of Goal 2 has been achieved. The country has therefore directed greater attention to the quality of education at that level.

In Dominica, most of the national stakeholders form part of the Millennium Development Goals (MDGs) Core Monitoring Committee. Those who do not form part of the monitoring mechanisms are invited for and in constant dialogue with the MDGs Monitoring Committee. Localizing the indicators also follows a similar process. The continuation of the process of localizing the MDGs Framework took a major step forward with a national one-day Consultation in December 2005 where the MDGs indicators and targets were presented. The localized indicators were presented as follows:

## Indicator:

Population and Family

Poverty:
Education: Number of Government Scholarships by Course of Study and Sex.

Health:

Environmental Sustainability: Household by Type of Tenure (includes households occupying state or abandoned lands).

The other major stage in the localizing process has been the formal launch of the Local Monitoring Framework and the execution of the comprehensive publicity and other
activities plan for the year. The plan of activities will be reviewed annually with close linkage to the adoption of recommendations.

## Analysis and Recommendation

A brief analysis based on selected indicators precedes each set of indicator. Recommendations are presented based on data trends and appropriate and relevant targets, since Dominica has long achieved some of the MDG recommended targets.

## Monitoring and Evaluation of Recommendations:

The adoption of recommendations and programmes will be continuously monitored and evaluated. Continuous discussions (with policy makers and other stakeholders) on the achievement and the realization of the recommended targets will form an integral part of monitoring and evaluation.

## DATA GAPS AND DATA QUALITY <br> Poverty

Dominica has made substantial progress in data collection in its national database over the last decade. This increase in data and data collection awareness has been further enhanced by qualitative analysis. This is evident in the presentation of indicators more importantly those complementing the socio-economic status of Dominica, the Carciom Core Social Indicators and the Millennium Development Goals (MDG). Within this broad data set are sub-set presentations.

The 2002 Country Poverty Assessment presents data on general Living Conditions recording poverty head count with age, gender and geographic distribution; health, employment, education, access to services and ownership of assets among others. The survey used a basic poverty line derived from a minimum food basket with an amount allocated to Non-food expenditure. The poverty line was estimated at $\$ 3,400$ per adult per annum and the indigent line estimated at $\$ 2,010$ per annum. The poverty rate was $39 \%$ among the population and $29 \%$ at the household level. The indigent population was $15 \%$ with approximately $11 \%$ at the household level.

The report further presents a qualitative summary on Poverty derived from a participatory assessment related by the "not so economically fortunate." Poverty indicators that can influence effective national social and economic planning are readily available from data on Living Conditions. However the poverty indicators from the MDG are derived from existing data sources, Health Administration in particular. Data is collected only on one indicator (underweight for under five(s)) but not disaggregated by gender. Data on the other indicator (stunted) are non-existent. Furthermore time series for monitoring trends are not available. The data for the poverty rate and poverty gap ratio is only available for the year 2002. Data on the one dollar a day indicator is not applicable since the Region has already achieved this goal.

## Recommendations for Solving Data Gaps on Poverty

At least three Living Conditions Surveys must be conducted before 2015 to monitor the reduction in poverty levels. A health administrative role must be activated to record and disaggregate data by gender for stunted and underweight children on a quarterly basis by the end of 2006.

Population censuses have been conducted every ten years, the last, 2001. Census is the most reliable source of information on a people. The census gathered information on population demographic, education, health, ethnicity, income, economic activity, household composition, sanitation and basic facilities, equipment, household tenure etc.
Data is available at the national and community level. The MDG indicators on Population and Family include contraceptive use by age-group. However since such data is not collected during a census, this gap will be addressed in the Health Section.

## Education

An extensive data system on key international indicators on Education are recorded and published yearly. All of the data for the MDG and Caricom Core Social Indicators on

Education are collected except on "Drop out Rate by Reason". Data on students granted government scholarship by field of study and sex is not systematically collected.

Although educational attainment, enrollment and completion are addressed in Population Censuses and Labor Force Surveys detailed information on Literacy is not available and presently no recent data exists.

## Recommendation for solving data gaps on Education

Conducting a Literacy Survey is critical to solving the existing gap. A Literacy Survey must be conducted immediately.

From an administrative role, data "on drop outs by reason" should be tabulated beginning the 2006/2007 academic year. Data on students granted government scholarship disaggregated by field of study and gender should be the role of the Government Training Department , Ministry of Education.

## Health

Key vital events, rates and immunization are continuously collected on an annual basis. The primary source of data is Health Administrative records. Rates on infant mortality, maternal mortality, crude birth, crude death, etc, are readily monitored as information is collected.

Data on disabilities is collected through the Population Census and other continuous surveys as the Labour Force and Living Conditions. However data on HIV/AIDS is restricted to general totals. Mortality from HIV/AIDS (related causes) by age can be extracted from the cause of death records of the health administrative unit. Data on occupation for the same indicator- mortality from HIV/AIDS by age group is not collected. In addition, no data exists on population 15 years and over with knowledge of HIV/AIDS by age and education.

Total female contraceptive use by method are collected and reported in the Health Indicators of the MDG and Caricom Core Social Indicators. However data is not collected for contraceptive use by age-group as presented in the MDG.

## Recommendations for Solving Data Gaps on Health

It would be necessary to coordinate efforts of the HIV / AIDS Coordinating Unit to review the information collected and explore the possibility of extracting information for Indicators required in the MDG and Caricom Core Social Indicators. In the absence of expected results from this possibility, at least three continuous HIV/AIDS survey, must be conducted before 2015, to complete these data gaps.

## Environmental Indicators

The Environmental indicators have been presented in reports such as the Population and Housing Census, Environmental Statistics Report of the Central Statistical Office (initially supported by the UN/CARICOM Program), the Caricom Environmental Indicators and the analytical presentation of the Initial Communication of Dominica
supported by the Global Environment Facility through the United Nations Development Programme, (November 2001).

However data for indicators on natural disasters, type of disaster; total casualties, total population affected, and damage is not collected and difficulties are encountered in finding such records. Information on Tourism is completed except for data gap for land area occupied by hotels.

## Recommendations for Solving Data Gaps for Environmental Indicators.

Given the vulnerability of the region to natural disasters, it is imperative that data is collected on disasters. Data collection and official information will assist in effective "pre" and "post" disaster planning as obtaining such data will increase efficiency in allocating resources. Estimates on disasters and its effects are usually inadequate in terms of accurate coverage and damage value of affected areas and population.

Hence it is pertinent that disaster preparedness agencies urgently begin the systematic collection of data registering disasters by time of occurrence, type of disaster, magnitude of disaster, number of casualties and injuries at the census enumeration district level, number of persons and households affected, value of damage to infrastructure, households, and the environment, value of damage to agriculture by main crops (on the district level), number of hours of work loss by private and public sector, number of job lost by private and public sector, number of business establishment closed, (postdisaster), number of public institutions closed, (post-disaster), value of revenue loss, by private and public sector.

## Global Partnership in Development <br> Economy, Employment/Labor Force

Data on Economy, Employment/Labor Force is produced in keeping with the international key labor market indicators. All indicators on Economy are completed with necessary footnotes.

## General Data Gaps and Recommendations

The recent trend in data presentation is its desegregation by urban and rural category. Although Dominica has made progress in its urban/rural classification, indicators have not been presented by this category since the urban/rural definition was not introduced until April 2005. The task of data reclassification is possible. However it demands time and other resources. It is recommended that the classification of areas in the urban, semiurban and rural categories is circulated to relevant data sources in order to produce data by these classifications beginning the end of 2006.

## Data Consistency/Reliability/Accuracy

The MDG and Caricom Core Social Indicators are important tools for measuring data consistency. The MDG indicators for example are "interlinked" and so data sets must be consistent. Following consistency checks the indicators are validated against published reports (in some cases).

Where discrepancies exist, verification is performed and amendments made. Such thorough review results in data accuracy, consistency and reliability thus enabling policy makers to formulate and implement effective decision-making for national development creating an improved socio-economic status of well-being for the nation.
(Data Gaps and Data Quality: Adapted from Caricom Study "Monitoring and Assessment of Programme Outcomes in the Social Sector Focusing on the Dimension of Gender," 2005)

## The Commonwealth of Dominica

## Description and General Background

The Commonwealth of Dominica is the most northern and largest of the Eastern Caribbean's Windward Islands situated between Latitudel5 20 minutes North and Longitude 6122 minutes West. It lies between the French islands of Guadeloupe to the north and Martinique to the south. The island is 751 square kilometers ( 289.5 sq miles) Dominica's climate is classified a humid tropical marine, characterized by little seasonal variation between the wet and dry season. Its pronounced high rainfall during the wet season contributes to its lush vegetation.

The island's topography is rugged with steep, luxuriant rain forest mountains, deep riverincised valleys and tree-covered hills that produce and sustain pristine rivers, perennial streams and tumbling mountain waterfalls. The island has great diversity of flora and fauna. The Morne Trois Pitons National Park (incorporating the central mountain range) is inscribed on the United Nations World Heritage List since 1998, based on the criteria of Outstanding Universal Value to Mankind, its natural aesthetic, rich bio-diversity and irreplaceable contribution to the understanding of science and natural landscape phenomena.

Dominica's relatively undisturbed and rugged landscape, extensive forest, pristine fresh and sea water and overall ecological system have contributed to Dominica's being acclaimed as "the Nature Island of the Caribbean". This label has impacted favorably in positioning Dominica's global choices as a tourist destination for nature lovers and environmental adventure seekers.The island is currently promoted and is in its developing stage as an eco-tourist destination. Visitor arrivals increased by $54.2 \%$ from 1993 to 2004, reaching a total arrival of 80,087 in 2004. The three major markets are the Caribbean, United States of America and Europe. Cruise lines call in regularly registering a record 383,614 passengers in 2004.

## Political and Economic Situation

Dominica attained political independence from England in 1978 and retains a political organization based on the British Parliament multi-party democracy. Dominica inherited its official language, English. However, partly due to historical influences, the majority of the population speak a patois "kweyol" composing of African and French linguistic structures.

The 2003 end of year population estimate 70,340 comprises mainly people of African descent and a small population of indigenous kalingo or Carib people, the survivors of the original or first people of the Caribbean. They presently occupy a demarcated area called the Carib Territory, on the northeast of Dominica. The island is subdivided into ten parishes with capital city Roseau, located within the parish of St. George in the southwest. The city of Roseau recorded a non-institutional population of 14,539 in the 2001 Population and Housing Census.

Traditionally, Dominica's economy has been based on agriculture. Recent global and regional events have contributed to the declining dominance of agriculture in particular the cultivation of bananas. Agriculture (mainly bananas) contributed to 20.0 percent of Gross Domestic Product in 1997 and 17.7 percent in 2003.

Economically, Dominica pursues and sustains a free-market and liberal economy. During the 2004 period the economy reflected an estimated growth rate of 3.57 compared to a 0.1 percent growth in the last year (2003). Tourism, Construction, Manufacturing and Agriculture Sectors contributed significantly to this growth. However, the rate of inflation as measured by the Annual Consumer Price Index rose by 2.46 in 2004 as compared to 1.44 percent in 2003. Percentage increases were recorded in group indices Fuel and Light: 7:53; Housing and Utilities: 4.68; Educational Expenses: 3.49 and Food: 2.80 .

## POPULATION AND FAMILY

#### Abstract

ANALYSIS Over the century (1901-2001) the population of Dominica moved from 26,841 in 1901 to 69,625 reflecting a 159.4 percent increase. The highest growth rate in any ten year period occurred between 1901 to 1911. After 1970, the rate of growth seemed to have slowed down. In fact, a negative annual growth of $0.4 \%$ was recorded for the period 1981-1991. According to the results of the 2001 Census, the population dipped again, recording a negative average annual growth of 0.21 (Table 1.1.0). The 2003 end of year population estimate decreased by a slight 0.08 percent over the adjusted 2001 end of year estimate (Table 1.1).

## Age Structure

The age structure of the population in 2003 revealed that the 20-59 age group accounted for the highest percentage of the population, 47.6 percent. The $0-19$ followed recording 38.7 percent. The 60 and over age-group increased steadily from 12.2 percent of the population in 1998 to 13.7 percent in 2003. The sex ratio registered 1013.7 (1014 males to every 1000 females). According to the end of year estimate the female population in the 0-19 age group represented 19.2 percent while males registered 19.5 percent. Females in the 20-59 age group recorded 22.8 percent while males accounted for 24.9 percent. In the 60 and over age group females accounted for a higher percentage, 7.7 in comparison to 5.9 percent of males.

## Marital Status and Age-Group

Over the last two Census periods (2001 and 1991) the 15 years and older population increased by 4.5 percent. The married population (of the 15 and over age-group) accounted for 28.3 percent in 1991 and 31.1 percent in 2001. Although the percentage of married women, 50.5 was slightly higher than that for men in the 1991 Census, in 2001 the trend was opposite, 49.6 for females. Women accounted for 74 to 75 percent of the widowed in both periods. In 1991 men registered 55.3 percent of the divorced but a sharp decline to 46.6 percent was recorded in the 2001 Census.

## Births Patterns and Fertility Rates

Total births decreased by 14.6 percent from 1998 to 2003 (Table 1.3) with the last year (2003), registering a record low, 1056 births and a 15.0 birth rate. The total fertility rate according to the 2001 census registered 3.0. The 20-24 age - group accounted for the most productive population in 1981. However in the 1991, and 2001 Censuses an older age-group the $25-29$ attained the highest reproductive rate. (Table 1.3A)

For the 1981, 1991, and 2001 censuses the age specific fertility rates revealed shifts in Dominica's fertility pattern. The total fertility rate recorded a drop, over the 1981 and 1991 period, moving from 4.2 in 1981 to 3.0 in 1991 but indicated a stable pattern of 3.0 up to 2001. In 2001 the 25-29 age-group, retained its position as the most reproductive. Over the last three census periods decreases in fertility rates were registered in all age-group except the 40-44, the oldest reproductive group. Over the last two census periods 1991 and 2001 the 35-39 age group recorded an increased rate.

The decline in teenage fertility closely corresponds to the steady decline in births to teenage mothers. From 1980 to 1990, the years before the censuses, teenage pregnancies decreased by 27.8 percent (Demographic Statistics No.1. 1993) while in a more recent period, in year 2000, a 25.2 percent decline in births was recorded over 1990. The stagnation in the present total fertility rate and the decline from the 1981 level are mainly attributed to the downward movements in the number of births coupled with the effects of migration. According to the 1991 and 1981 Census, in spite of a 4.5 percent increase in the number of women within child-bearing age, their age specific fertility rate over the period moved from 158.3 to 108.2 , as lower births were recorded during that period (Table 1.3A).

The mean age at child-bearing increased from 26.5 to 27.2 years for that period (1981 to 1991). In 2001 the trend was reversed as the child-bearing population decreased by 3.4 percent. Births also fell, reflecting a 10.2 percent decrease over the last census period. These dual processes reduced the age specific fertility rate to 100.6 in 2001 . The mean age at child-bearing increased to an older age, 27.8 years. In the last three years a younger age group, 20-24, recorded the highest reproductive rate, registering a shift from the 25-29 age group. This rise in trend may be partly attributed to steady births in spite of lower population in that age-group (20-24). Interestingly, the $30-34$ age group registered a comparable number of births to that of the younger age-groups.

## Households

Over the last ten years women-headed households stood at 36.9 percent. Increases were recorded in households with one to four persons, as much as 36.8 percent in the two person household . Conversely six or more persons household registered decreases over the period. Male headed households accounted for a higher percentage in all household size.

## Population and Family Recommendations

1. The Ministry of Health and Social Security along with the Ministry of Finance and Planning prepare a draft Population Policy by June 2006.

## Examine possibilities for increasing population growth

2. The Ministry of Health and Social Security decide on a reproductive expectation every 10 years that is after every Census. A reproductive expectation is government's desired goal on reproduction for e.g. a minimal increase in births (about $10-20 \%$ ) a sizeable increase (about $21 \%-39 \%$ ) or a sharp increase over (over 40\%) ; or stabilize births and/or create programs to promote immigration, and curb migration levels.
3. The Ministry of Health and Social Security and other appropriate ministries decide on efforts in curbing population outflows. Recommendations may consider some incentives as:
(a) reviewing salary scale in specific occupations/ professions for e.g. nurses, teachers, computer technicians, and other marketable professions. Proposals on the latter should be considered by July 2006.
(b) Following the results of the 2004 Wage Survey, gross earnings of wage-earners and salaried employees falling below $\$ 300.00$ per month be increased by at least 15 percent. This recommendation should be submitted to the Ministry of Labour by September 30, 2006.

## Millennium Development Goals (MDGs) -Poverty

#### Abstract

ANALYSIS

According to the 2002 Survey of Living Conditions the annual per capita household expenditure of the poorest household is ECS $2,670.00$. This means that these households are not able to adequately meet their basic needs and are therefore poor. This expenditure $(\$ 2,670.00)$ represents the upper limit of the quintile suggesting that there are many households falling well below this level including indigent (very poor) households, (Table 1).

By comparison, households in quintile five (5) spend over EC $\$ 11,100$ per capita (Table 1), registering about four times the amount that households in quintile one (1) spends. Poor households are also larger than not poor households. The average household size of 4.6 persons for poor households is almost double the size of that for not poor households of 2.4 persons.

Poor households spend approximately $54 \%$ of their income on food, leaving only about $46 \%$ for non food expenditure. According to the Survey the share of the poorest quintile in national consumption is $7.6 \%$. There are no trend data which would permit comparison over time. However, according to similar studies, this trend is comparable to other subregional countries for which such data is available.

Household poverty in Dominica is recorded at 29\%. This means that just about 7,000 households in Dominica were poor in 2002. Approximately, $11 \%$ of households were indigent. This is about 2,500 households. These households are not able to meet the daily basic dietary requirements. Individuals in these households have an average per capita expenditure of below EC $\$ 2,011$. They are either not meeting or barely meet their basic food needs. Households which meet their basic food needs but are unable to meet all their non-foods needs were classified as poor and recorded $18 \%$ of all households. This would be approximately 4,400 households not having a per capita expenditure of EC $\$ 3,400$.

Head count poverty registered $39 \%$ of the population of Dominica. This means that about 27,000 persons in Dominica have expenditure below an annual income of EC $\$ 3,400$. Approximately $15 \%$ are considered to be very poor or indigent recording approximately 7,900 individuals in the population not meeting their daily dietary requirements. However, about $61 \%$ of the population can be considered not poor.

The number of poor individuals in Dominica is relatively high and Dominica's poverty is largely income or economic poverty owing to the rapid decline in banana earnings (a once major export earner) which cuts across all sectors. However, the fact that the poverty head count ( $39 \%$ ) is higher than the level of extreme poverty ( $15 \%$ ) suggest that the majority of Dominicans can satisfy their basic needs. The fact therefore that the number of indigent individuals in Dominica is relatively low provides an opportunity for the elimination of indigent head count poverty in the country.

The poverty gap for Dominica represents $10.2 \%$. The poverty gap measures the depth of poverty; the extent to which the incomes of poor households fall below the poverty line. This means therefore, 4,300 households in Dominica on average have expenditure that fall approximately $10.2 \%$ below the poverty line of $\$ 3,400$ (per year).

Prevalence of under-weight children under five (5) years of age though minimal records 14 cases to every 1000 children under 5 years.

## Recommendations

1. Institutionalize of the Survey of Living Conditions (SLC) every four (4) years and Core Welfare Indicators Questionnaire (CWIQ) survey every two (2) years.
2. Inform the Social Services Department of the availability of statistical data that will assist in the more effective delivery of services, take immediate corrective measures and reduce duplication of routine work.
3. Restructure and empower the social services sector to build capacity to identify/detect and address the problems of indigent persons within the community.
4. Promote, implement and encourage employment creation through economic growth targeting youths and ensuring that there is a greater linkage between education and the economic growth sectors.
5. Expand the school feeding programme to cover a larger percentage of the school population, particularly the underprivileged.
6. Collaborate with the Ministry of Health to identify underweight children, assess their socio-economic situation and take corrective measures where appropriate beginning June 2006.

## Notes:

Underweight:
"Underweight" or low weight for age is a measure of child's weight for age in relation to the median value of a standard reference population.
Stunted
"Stunted" or Low height for age relates the child's height to her/his age in reference to the median value of a standard reference population.

## Wasted

"Wasted" measures the child's weight according to height in relation to the median value of a standard reference population.
Prevalence of underweight children (< 5 yrs . of age)
Number of underweight girls (boys) aged less than five years old, divided by the total number of girls (boys) in that age group, times 1000

## Millenium Development Goals (MDGs): Education

## ANALYSIS

## Access and Coverage

## Primary

Dominica has long achieved universal access to primary education as the educational system has sufficient physical capacity to meet the needs of every child of the primary school age population. In addition the Education Act of 1997 mandates compulsory education for all children ages 5-16.

## Ratios

The participation of students in primary education is determined by the gross and net enrolment ratios. Of the students attending primary education in 2002/03, $52.8 \%$ are boys and $47.2 \%$ girls. (Table1.3). The average gross enrolment ratio (GER) (total enrolment regardless of age) for the period 1998/99 to 2002/03 was 98.0 while the net enrolment ratio (NER) (total enrolment within the primary school age population 5 yrs- 11 yrs ) for the same period was 90.9 . This suggests that about $9.0 \%$ students of the primary school age population are not at school. In relation to the girls to boys ratios a higher number of boys than girls, are at primary school. To every 100 boys there was an estimated 94 girls in the primary schools in the 2002/03 academic year.

## Survival Rate

The survival rate to grade six, measures the percentage of a cohort of pupils who were enrolled in the first grade in a given school year and who eventually reach the grade of completion. Based on a cohort analysis at the primary level, the survival rate up to grade four (previously grade five), is estimated at 92.0 . However survival to the $5^{\text {th }}$ and $6^{\text {th }}$ year is 85.0 . The 15.0 difference may be attributed to migration.

## Secondary

This second level of education reflects a reverse (in comparison to primary level) in terms of gender enrolment (Table 1.4). The data indicates an average of $45 \%$ male and $55 \%$ female enrolment. The gap in enrolment reflects the performance achieved through the National Common Entrance (Secondary School Entrance) Examination, over the years. To every 100 boys there are (on average) 108 girls at the Secondary Level.

## Post Secondary/Tertiary

Access to tertiary level education increased in 2002 with the establishment of the Dominica State College (DSC) (Table 1.5). Prior to the 2002/03 academic year an average of $42 \%$ secondary school graduates accessed tertiary education. With the inception of the State College the enrolment increased by $63 \%$. The average ratio of girls to boys is 155 girls to every 100 boys overall. However a closer look at the Technical Vocational studies reveals that more males are enrolled in such studies, an average of 25 women to 100 men (Table 1.9). The expansion of the tertiary education can be considered a landmark in the history of the education system.

## Repetition and Dropout Rates

At the primary level for the period 1998/99 to 2002/03 the average repetition rate for boys was 3.7 and girls 2.6 (Table 1.6). The average dropout rates for the same period were 0.38 boys and 0.32 girls respectively. In absolute terms, an average of 32 boys and 21 girls dropped out yearly from
the primary cycle. It is important to note here that children who migrated are recorded in the drop out category. However this situation is being addressed to distinctly present drop out data by reason.
The average repetition rate at the secondary level for the period 1998/99 to 2002/03 was 10.8 (Table 1.6). During that period the rates were higher in form one averaging 17.4. The drop-out rates at the secondary level records an average 2.6 for boys and 1.8 for girls (Table 1.7). In absolute terms boys averages 65 and girls 56 (drop out) yearly.

## Staff

Pupil-Teacher Ratio
For the period 1998/99 to 2002/03 the primary level pupil-teacher ratio averaged 1:22 and 1.18 at the secondary level.

## Teacher Status

## Primary

On average $79 \%$ of primary school teachers are female and $21 \%$ male (Table 1.10). In 2002/03, a total of 357 teachers or $60 \%$ of the 594 teachers were trained while 237 or $40 \%$ required the formal training program (Table 1.11).

## Secondary

The gender perspective of staff at the secondary schools is almost the same as that of the primary. In 2002/03 female teachers accounted for $68 \%$ of the staff while males accounted for $32 \%$ reflecting a greater number of women in the teaching profession.

## Recommendation

## Education

1. Institute Social and Learning Support System (psycho, social, remedial) that promotes programmes for children at risk by the 2007/2008 academic year.
2. Implement a multi sectoral approach to locate and identify children who are not at school by academic year 2007/2008.
3. Increase Public Education on issues of concern, human rights and the rights of the child by 2006/2007 academic.
4. Increase by $25 \%$ the percentage of trained teachers at both primary and secondary schools. Exploring opportunity through regional institutions in addition to the Dominica State College.
5. Redefine the recruitment process to have more graduate teachers at the secondary level from the 2007 academic year.
6. Encourage and promote the increase and recruitment of qualified male teachers within the school system from the 2006 academic year.
7. Implement policy of pre-service teacher's education training in partnership with the Dominica State College (D.S.C.) from the 2006 academic year.
8. Significantly increase material and learning resources to increase performance of all children from the 2006 academic year.
9. Encourage, promote and seek funding for qualitative classroom research from the 2006 academic year.
10. Integrate technical/vocational skills programme in secondary school curriculum from the 2007 academic year.
11. Conduct a Literacy Survey by August 2006.

Source: Education Planning Unit and Population data from Central Statistics Office

Notes:
a: / Net Enrolment Ratio in Primary Education
It is the number of $\mathbf{6}$ to 13 years (age group may be differed from country to country) girls (boys) enrolled in primary education, divided by the total population of girls (boys) in that age group, times 100. Please note that this age group is used as an example and the actual age group used, should be the one covered by the primary education in b: / Propotion of children starting grade 1 who reach grade 5
Number of girls (boys) completing fourth grade (or reaching grade five) of the primary stage as a propotion of the number of girls (boys) in the first primary grade four years previously.
c: / Ratio of girls to boys
Number of girls divided by number of boys in primary of giris to 100 boys
Source of the definitions: Gender Indicators for follow-up and evaluation of the regional programme of action for the women of latin America and the Caribbean, 1995-2001 and the Beijing Platform for action.- ECLAC, Santiago, Chile. 1999

## Comments:

The percentage change in enrolment from 1998 to 2002 recorded a decrease of -10.7. This indicates a falling enrolment at that level. Factors affecting enrolment are falling birth rate, migration and the movement towards universal secondary education.
Primary data exclude students in the Junior Secondary Programme (JSP) which is part of All-age primary but considered as lower secondary. The JSP runs from Form 1 to Form 3.

| Ratio of girls to boys in tertiary |  | 156 | 146 | 152 | 156 | 156 |

Source: Education Planning Unit
Note: The Data refers to the Clifton Dupigny Community College now the Dominica State College. At that level student complete second year university level and certificate programmes.

1. Other Tertiary includes Universities.
2. Public refers to government and government assisted schools.
3. Private institutions are maintained and operated by private bodies
without the assistance from the State.
Ratio of girls to boys in tertiary education
Number of girls divided by number of boys in tertiary and
presented as number of girls to 100 boys.
Comments:
The constant increase in access to secondary education has expanded the need for tertiary level education. This is evident in the yearly increase in enrolment at the Dominica State College and is most evident in the percentage change of $21.8 \%$ between 2000 and 2001and the significant 85.7 percent increase for the. 2002/2003 academic year.

Source: Education Planning Unit
Notes:
Progression rate
Ratio of number of giris (boys) studying at one level divided by number of girls (boys) studied at previous level.

## Repeater rate

Repeaters are students who do not advance one grade but are retained in the same grade in which they were prevlously enrolled, due to the Inability to fultill the required for promotion to the next higher grade.
$n / P_{y-1}$
$\mathbf{n}$ : Number of repeaters in a particular grade in the current academic year.
$\mathbf{P}_{y-1}$ : Population of students in a particular grade in
the prevlous academic year.

## Drop-out rate

Number of drop-outs as a percentage of the total number of students enroled in primary and secondary school respectively.

## Notes:

Age groups for primary and secondary are defined according to national regulations.

## School drop-out rates:

Number of girls (boys) dropping out of school
primary / secondary divided by total number of
giris (boys) attending school primary / secondary
levels.

## Sex composition of school drop-out

Number of girls (boys) dropping out of school in primary or secondary divided by total number of children dropping out from relative level, times 100.

## Notes:

Percentage distribution of teachers by level
Number of women (men) teachers at level 1, divided
by women (men) teachers at all levels, times 100
Sex composition of teachers by level
Number of women (men) teachers at level 1, divided
by all teachers at level 1 , times 100
Public refers to government owned schools.
Private refers to government assisted and total privately financed schools.
Comments:
The number of teachers does not include principals. ( 65 in the primary schools and 15 in secondary).

## Millennium Development Goals (MDGs) - Health

## ANALYSIS

The Millennium Development Goals (MDGs) that fall under the responsibility of the Ministry of Health and Social Security (MoHSS) are:

- Reduce child mortality - reduce 1990 under five mortality rate by two-thirds by 2015
- Improve maternal health - reduce 1990 maternal mortality rate by two-thirds by 2015
- Combat HIV/AIDS, malaria and other diseases - halt and begin to reverse the spread of HIV/AIDS by 2015

## Achievements

The activities of the MoHSS are guided by the National Strategic Health Plan which recognizes maternal and child health along with HIV/AIDS as well as other communicable diseases including tuberculosis as priority health issues to be addressed.

Maternal mortality has remained low in Dominica with maximum of one death in any one year that maternal mortality has occurred over the past eight years. Those maternal deaths that occurred were due to complications of pregnancy, childbirth or the puerperium.

The MoHSS has been able to maintain high immunization coverage (over 98\%) for BCG, measles, mumps, rubella, diphtheria and poliomyelitis vaccines since the 1990s. Dominica has not recorded a childhood case of disease covered by these vaccines for over 10 years.

In addition to the vaccine preventable diseases Dominica has made significant progress in combating many of the other communicable disease. The last cases of indigenous malaria were back in the 1960s. Even though dengue fever remains endemic, there have been no deaths from dengue in recent memory. Indeed the mortality profile of Dominicans is dominated by the chronic non-communicable diseases (cardiovascular disease including hypertension and stroke, as well as cancer) - a profile similar to that of the developed nations.

A strategic plan for addressing HIV/AIDS was released in September 2003 and significant advances are being made in re-establishing the National HIV/AIDS Programme by the current HIV/AIDS Office.

## Challenges

The majority of deaths occurring under five years of age occur in the first year of life and more so within the first month. There is a need to further elucidate the underlying causes of these deaths especially to see whether any factors that are amenable to public health
interventions are in operation. Investments in more sophisticated hospital care in the early days of life especially for premature infants may need to be considered.

A major challenge for the MoHSS will be to maintain the gains that have been achieved in the control of communicable diseases in Dominica while tackling challenges such as HIV/AIDS and tuberculosis at the same time. Given the decline in the country's economic fortunes it is apparent that much of the resources required will need to be accessed from external sources such as the United Nations Global Fund for HIV/AIDS, Tuberculosis and Malaria. This support is crucial since the rate of increase in newly identified cases of HIV has not significantly diminished since the first case was diagnosed in 1987. It is of further note that the majority of persons infected and who have died from HIV/AIDS are in the 20-55 year age group - the most productive segment of the population.

Although there have been no local transmission of malaria since the 1960s the mosquito responsible for the transmission of malaria Anopheles spp. remains on the island and therefore poses a threat for the re-introduction of indigenous malaria. Efforts to control this mosquito along with systems for the early identification of persons who may develop malaria locally after having contracted it abroad, need to be strengthened, especially with the increase in visitor arrivals including arrivals from areas with endemic malaria.

## Recommendations

- Improve perinatal morbidity and mortality surveillance by end 2006
o The factors contributing to perinatal morbidity and mortality, especially those amenable to public health interventions, need to be identified and properly documented so as to allow for the appropriate interventions to be developed.
o Postmortem examinations are to be done on all perinatal deaths.
- Expand Immunization Programme to provide coverage against additional childhood diseases by end 2006
o At the present time there are plans to introduce pentavalent vaccine into the government's immunization programme so as to further reduce the impact of vaccine preventable diseases
- Review, redefine and implement the National Strategic Plan for HIV/AIDS Programme by end 2006
Now that the Office for the National HIV/AIDS Programme has been re-established the National Strategic Plan needs to be reviewed against the recent changes in availability of effective treatments for HIV and associated infections. Greater emphasis needs to be given to prevention efforts especially among the teenage/early adult population.
- Strengthen the surveillance of sexually transmitted diseases, tuberculosis and malaria by integration with HIV/AIDS Programme by end 2007.
- Increase the allocation of resources for health promotion/education and health information by July 2006
o Health promotion strategies are fundamental to the continued reduction of behaviours that negatively impact on health.
o Modern health information systems are crucial for the appropriate allocation and monitoring of resources in health so as to maximize the positive impact of expenditure on health issues. Use of existing technology and the allocation of appropriately trained staff (especially staff trained in computer/information technology) should ensure that the necessary upgrades take place at the primary and secondary care levels.
- Strengthen national vector control programme so as to eliminate $50 \%$ of anopheles-infested areas by 2015
o Use BTI or other means to destroy mosquito larva
o Landfill or drain swampy areas amenable to such interventions especially those in close proximity to populated areas
- Improve research capacity and develop research agenda in the MoHSS by end 2008
o Health staff should be continually trained in research methodologies especially in collaboration with the Caribbean Health Research Council (CHRC).
o Resources need to be specifically allocated to research in the health budget
o Coordinate health-related research activated through the Health Information Unit - this has implications for staffing and physical space as both of these resources are currently inadequate.
- Foster greater collaboration between the MoHSS and
o Government agencies such as
- Ministry of Finance
- Central Statistical Office
- Ministry of Agriculture
- Ministry of Education
o Private institutions, NGOs and Civil Society such as
- Ross University
- Christian Children's Fund (CCF)
- Dominica Planned Parenthood Association
- Fair Trade Organization

This is crucial to ensure that resources are allocated and used as effectively as possible. This greater collaboration may be achieved through

- Ensuring MoHSS representation in working groups such as the National SIMDGs Committee (already established)
- Establishing electronic linkages such as listservs in specific themes by end of 2007

1.2.1 Mean Population and Vital Rates 1992-2003
1.3 Number of Infant Deaths by Age group - 1998-2003
1.4 Number of Deaths Under Five Years by Age Group-1998-2003
1.5 Number of Maternal Deaths by Cause -1998-2003
1.6 Number of Births Attended by Trained/Untrained Personnel classifiedby type of Occupation -1998-2003
1.7 Population with Disability by Type of Disability - 2001
1.8 Number of Deaths by Cause and Age Group
(a-f) 1998-2003
1.9 Distribution of Households by Source of Water Supply(Access to Safe Water) 1991 and 2001
1.10 Distribution of Households by Sanitation facilities 1991 and 2001
1.11 Number of Health Care Institutions 1998-2003
1.12 Number of Physicians 1999-2003
1.13 Population 15 years and over, who have knowledge of HIV/ AIDS byEducation and Age Group
(a-f) 1998-2003 (not available)
1.14 Population - who were treated for HIV/AIDS by Education and AgeGroup
(a-d) 1988-2001 (not available)
(e) 2002
1.15 Number of Newly Confirmed AIDS Cases by Risk Group/ExposureCategory and Age Group
(a-e) 1998-2002
1.16 Number of Health Personnel Trained In HIV/AIDS Care and Management By Selected Occupation (not available)
1.17 Number of Deaths from AIDS by Age Group, Occupational Group and Geographical Area
(a-e) 1998-2002
1.18 AIDS Mortality as a Percentage of Total Mortality 1998-2003
1.19 Cumulative Total of Confirmed HIV/AIDS Cases by Age Group 1998-2002
1.20 Number of Births and Crude Birth Rate 1998-2003
1.21 Number of Deaths and Crude Death Rate 1998-2003
1.22 Number of Children One year Old Immunized against Preventable Diseases 1998-2002
1.23 Number of Pregnant Women/ Girls with HIV by Age Group 1998-2002
1.24 Female Population 15 yrs and over by Contraceptive Use 1998-2003
1.25 Cumulative Number of Children Orphaned by HIV / AIDS 1998-2002

Notes:
Indicator Health 1.1 :Life Expectancy at birth
This is defined as the average number of years that a new born
child would live for if all the years of life of the cohort to which
that child belonged were divided equally between its members.
Life Expectancy at 5 years of Age
This is defined as the average number of years that a 5 year of age child would live for if all the years of life of the cohort to
which that child belonged were divided equally between its
members.

Source: Health Information Unit, Ministry of Health.

## Notes:

Less than 1 month is actually less than 25 days

## Infant Mortality Ratio:

The number of infant deaths before reaching her or his first birthday per 1,000 live births during same Still births are not counted in the total.

Comments: Data collected for under 28 days, and 28 days to 11 months.

## Under Five Mortality Rate

Table -1.4 Number of Deaths Under Five Years by Age Group

| Age group | Sex | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |

Notes:
PLEASE NOTE THAT DETAIL DEFINITIONS FOR SUB CATEGORIES IS GIVEN IN THE UNSD/UNEP QUESTTIONAIRE 2004 ON ENVIRONMENT STATISTICS, WHICH HAS BEEN CIRCULATED AMONG MEMBER STATES.

Forests
Land under forestry or no land use, spanning more than $0.005 \mathrm{~km}^{2}$ ( 0.5 hectares); with trees higher than 5 meters and a canopy cover of more than 10 percent, or trees able to reach these thresholds in situ. Please include mangroves and forests on wetlands according to the above height and canopy coverage.

Total Land Area
Total land area excluding area under inland or tidal water bodies.

Notes:
A combined assessment was done for the landslide and earthquake in 2004 since the occurrence was about the same time.
H: Hurricane, TS: Tropical Storms, E/L: Earthquake/Landslide

1. A natural event which overwhelms local capacity, necessitating a request for national or international assistance, or is recognised as such by a multilateral agency, or by at least two sources, such as national, regional or international assistance groups and the media. There are two types: sudden-impact disasters e.g. earthquakes; or those that develop gradually, e.g. drought.
2. Avalanches, floods, earthquakes, cyclones, torrential rains, volcanic eruptions, typhoons, droughts, landslides, mudslides, fires, blizzards, tsunamis, etc.
3. For sudden-impact disasters: onset date;
4. Covers all casualties, as well as others whose basic requirements for food, shelter, sanitation and medical, etc. were adversely affected.
5. Estimated value of all damages and economic losses directly related to the occurrence of the given disaster. The economic impact be direct (e.g. damage to infrastructure, crops, housing) or indirect (e.g. loss of revenues, unemployment, market destabilization).

## Millennium Development Goal (MDGs) - Global Partnership

## ANALYSIS

Preliminary data for 2004 revealed that activity in the Dominican economy improved with real output increasing by approximately 3.57 per cent compared with the 0.1 percent recorded in 2003 (Table 2.2). This improved performance was mainly influenced by the increased output in the agricultural, manufacturing, construction and tourism sectors. However, the rate of inflation as measured by the change in the Consumer Price Index rose by 2.45 per cent compared to a 1.44 per cent increase in 2003 .

## Agricultural Sector

After seven consecutive years of contracting, preliminary data from the agricultural sector recorded an increase of approximately 3.5 percent in real output compared to the 3.4 per cent decline in 2003. The crops sub-sector increased by 4.29 per cent due in part to the improvements in the banana industry (Table 2.4). Total banana export revenue increased by 22.99 per cent recording EC $\$ 19.58 \mathrm{~m}$, compared to EC $\$ 15.93 \mathrm{~m}$ obtained in 2003. An increase was also recorded in the export revenue of other agricultural crops which recorded EC $\$ 16.74 \mathrm{~m}$ compared to $\mathrm{EC} \$ 15.14 \mathrm{~m}$ in 2003.

## Manufacturing Sector

The manufacturing sector recorded growth in real value added of 5.17 per cent. The expansion in this sector's output for the year 2004 was mainly as a result of an increase in the production of beverages and soap. The growth in output of beverages was largely associated with both the increased local demand and the exports of alcoholic beverage and water

## Tourism Sector

Preliminary data on the tourism sector indicate signs of recovery in 2004 after recording contractions for three consecutive years. A 11.72 per cent increase was recorded in real output for that sector in 2004. The sharp improvements was influenced largely by the 9 per cent growth in stay-over visitors including a 7.9 per cent increase in tourist in paid accommodations.

The cruise ship industry also showed significant improvements with the number of cruise ship passengers increasing to 380,161 from 177,044 in 2003 while the number of calls rose from 206 in 2003 to 286 in 2004. This improvement was partly influenced by the impact of Hurricane Ivan in Grenada resulting in diversion of calls to Dominica. Additionally, an unusual trend was noted where ships visited regularly during the off season (particularly regular weekly stops of a large ship).

## Construction Sector

The Construction sector expanded at a slower pace, recording an increase of 7.6 per cent compared to the 11.42 per cent recorded in 2003. Growth in this sector was influenced by larger investments in the public and private sectors. In 2004, public sector
construction investment included the fisheries complex at Marigot, rehabilitation of the Guillette/Penville road and sea defences at Guelle Lion/Anse Cola and Deep Water Harbour. In the private sector the number of homes started in 2004 grew by 27.35 per cent. In addition, the importation of construction materials also grew significantly recording an increase of 14.21 percent

## Transportation and Communication Sector

The transportation sector recorded a significant increase of 15.80 per cent compared to a growth of 5.37 per cent in 2003. This performance was largely due to the increased activity in the road (visitors tours), sea and air transportation sub-sectors which reflected the expansion in the cruise industry, construction sector and the increased imports. The value added in the communications sector increased by 5.00 per cent after three consecutive years of contraction in activity. This performance in 2004 was due in part to the introduction of two new companies coupled with increased demand in the telecommunication market.

## Government Sector

The value added in the Government sector contracted by 4.77 per cent mainly due to the government's expenditure measures particularly in Wages and Salaries.

## External Sector

Preliminary data for 2004 revealed a widening of the current account deficit to EC $\$ 112.83 \mathrm{~m}$ compared to a deficit of EC $\$ 79.48 \mathrm{~m}$ experienced in the 2003. A 13.48 percent increase was recorded in payments for imports of goods, reflecting increased imports of construction materials, petroleum products, and food products. Exports receipts increased by 2.7 per cent largely attributed to the 22.99 per cent increase in earnings from banana exports and 10.57 per cent increase in other agricultural exports. However, chemical and related products decreased by 27.55 per cent. In the services account, gross receipts from travel were estimated at EC $\$ 163.69 \mathrm{~m}$ compared to EC $\$ 141.15 \mathrm{~m}$ attained in 2003. This performance was a reflection of the rise in the number of tourist arrivals ( 9.3 per cent) and the marked increased in cruise ship visitors ( 114.74 per cent). Of the key visitor markets, the largest increases were recorded in arrivals from the United States, Germany and the French West Indies.

On the capital and the financial account, capital transfers rose by 25.41 per cent with inflows of capital grants to general government increasing by 29.68 per cent to EC $\$ 55.66 \mathrm{~m}$ in 2004. Contributing to this increase were grants received from the Government of Japan for the continuation of the construction of a fisheries complex and the receipt of funds from the Peoples Republic of China. Gross inflows of government loans registered EC $\$ 55.19 \mathrm{~m}$ in 2004 compared to $\mathrm{EC} \$ 49.79 \mathrm{~m}$ in 2003.

## External Trade Statistics

## Exports

Dominica's total domestic exports for 2004 were valued at $\$ 107.1$ million recording an increase of 2.7 percent over the 2003 value, the first increase recorded since 1998. The major contributors to domestic exports were soaps and bananas.

Soaps:
As a share of domestic exports in 2000, soaps accounted for 26.4 percent, 27.4 percent in 2001, 25.3 percent in 2002, 27.9 percent in 2003 and 28.1 percent in 2004. In value terms the earnings registered 36.4 million in 2000 and $\$ 30.8$ million, in 2001, reflecting a 15.4 percent decrease. A further decrease of 12.5 percent was recorded in 2002. However from 2003 an increase of $7.9 \%$ was realized over 2002. For 2004, soaps exports were valued at $\$ 30.1$ million reflecting a slight increase of 3.5 percent over 2003's \$29.1 million.

## Bananas.

In 2001 Banana exports were valued at $\$ 22.2$ million, compared to $\$ 32.5$ million in 2000 registering a significant decrease of 31.5 percent. During 2003 the total value exported recorded $\$ 15.9$ million compared to $\$ 22.0$ million in 2002 , reflecting a 27.5 percent decrease for that period. For 2004 exports earnings recorded $\$ 19.6$ million registering an increase of 22.9 percent over the 2003 value.

## Imports

Total imports for 2004 were valued at $\$ 392.0$ million, recording a 13.5 percent increase over 2003.

## Imports of Principal Items:

The food import bill accounts for an average of 17.8 percent of total imports with the main items-Meat and Meat Preparation, Milk, Flour and Fish and Fish Preparations.

During 2004, 2003 and 2002, Electric Machinery, another major commodity imported under the principal items category of imports, accounted for $10.6 \%, 9.3 \%$, and $7.3 \%$ respectively. In 2001 and 2000, Machinery other than electric, was one of the major commodities imported, accounting for $10.8 \%$ and $10.5 \%$ respectively. In 2004 this commodity accounted for 8.2 percent of imports. Other major commodities imported in that category were Metal and their products accounting for $8.7 \%$ in 2001, 6.4 percent in 2003 and 6.5 percent in 2004. Transport equipment followed accounting for 8.5 percent in $2000,6.1 \%$ in $2001,6.7 \%$ in $2002,6.0 \%$ in 2003 and $6.3 \%$ in 2003.

## Trading Partners:

From 2000 to 2004 Dominica's main trading partners in exports were the countries of the Caribbean Region, the Organisation of Eastern Caribbean States (OECS) and the rest of CARICOM countries followed by the European Union. The main trading suppliers were
the United States of America, the O.E.C.S. and the rest of the Caribbean Community (CARICOM).

## Recommendations

Agricultural Sector
Increased production and marketing must be undertaken for non-banana agricultural crops including citrus crops. The formation of a private sector led body along the lines of the Dominica Banana Producers Limited (DBPL) should be established for the purchase and distribution of non-banana agricultural crops.

Manufacturing Sector
-Locate regional and international markets for increase exports of bottled water and beverages by July 2008.

- Operate at least one multi product agro-processing plant by June 2012.

Tourism
A flagship hotel which will attract more visitors in hotel accommodation should be considered within the next three years.

## Employment / Labor Force

## ANALYSIS

The review and comparative analyses of the labor force are based on the 1997 and 1999 Labor Force Surveys and the 1991 and 2001 Population and Housing Censuses. The results of the 1997 and 1999 Labor Force Surveys and the 2001 Population Census recorded a steady decline in the unemployment rate from 23.1 percent in 1997 to 11.0 percent in 2001. This interestingly corresponds to the trend of a declining labor force over the periods. The labor force represented 40.6 percent of the population and 57.5 percent of the 15 years and over population in 2001. In comparison to the 1991 Census the labor force represented 37.9 percent of the total population and 56.9 percent of the 15 years and over population.

The employed population decreased by 3.4 percent from 25,694 persons in 1997 to 24,811 in 2001. This declining movement may be attributed to the effects of outmigration. Over a longer period, from the 1991 to 2001 Census the employed population moved by just about 4.0 percent (Table 1.3).

According to the 2001 Population Census women accounted for a lower unemployment rate 9.5 percent as compared to 11.9 percent for men (Table 1.2). This reflected a reverse trend from the 1997 and 1999 Labor Force results and the 1991 Population Census which recorded a 10.5 percent unemployment rate for women and 9.6 percent for men.

A striking movement of status in employment is the sharp decrease in employers particularly over the last ten years. This "status in employment" moved from a total of 1,715 in 1991 to 1,235 in 2001 recording a 28.0 percent decrease. Own account worker decreased by 3.1 percent over that period (Table 1.3). On the other hand, paid employee increased by 15.6 percent moving from 14,646 to 16,932 persons.

Over the two census periods occupational groups have taken interesting turns.
(Table 1.4). The gap has slightly widened for the occupational group Legislators/Senior officials/Manager. In 1991, females in this group accounted for 3.2 percent of the employed with males close enough representing 2.6 percent. However in the 2001 Census females further edged recording 3.9 percent while males accounted for a stagnated 2.9 percent.

The gap for professionals narrowed with women professionals recording just about 0.9 percent of the employed in comparison to a 1.6 percent for men in 1991 while in 2001 the number of women professionals grew by 90.8 percent accounting for 1.7 percent of the employed. In contrast male professionals increased by 30.3 percent and registered an almost equal percentage, 2.0 of the employed.

The number of technicians and associate professionals increased by 13.6 percent with a higher increase, 19.2 percent rise for women and 6.9 percent rise for men.

Of great interest is the 11.4 percent decrease in elementary occupation particularly women, who registered a significant 21.0 percent reduction. In contrast men recorded a 2.6 percent increase in this occupational group. The agricultural group reflected fewer employed persons, recording decreases in both sexes. Women agricultural workers decrease by 6.5 percent while men recorded a 24.0 percent decrease. Overall a 21.9 percent decline was registered for agricultural employees. In spite of this decline, this occupational group continues to account for the largest category of employees representing 23.8 percent of the employed population in 1991 and 17.8 percent in 2001. Percentage increases were registered for Occupational groups: Legislators/Senior Official/Managers, 20.3; Professionals, 52.2; Technicians Associate Professionals, 13.6; Clerks, 24.4; Service Workers, 74.4; Craft \& Related, 4.8; Plant \& Machine Operators, 28.9;

Percentage decreases were recorded for Agricultural Workers 21.9; and Elementary Occupation 11.4.

Of striking observation is the sharp increase in the percentage of both sexes in the services occupational group. Women service employees increased by 72.9 percent with an almost similar increase of 76.4 for men. This significant increase in the services occupation may be attributed to the progressive development of the tourism and manufacturing industry. The service occupation accounted for 13.7 percent of the employed in 2001 in comparison to an 8.2 percent in 1991.

Women accounted for 39.5 percent of the employed in the 2001 Population Census up from 34.6 percent in the 1991 Population Census.

## Recommendations

The labor market occupation indicators reflects improvements and an increase trend towards education and skills. However since elementary occupation (although recording a sharp 11.4 percent decline) still accounts for 15.8 percent of the employed, appropriate education and skills program should be increased to target this category of workers. The medium to long-term benefit would be to acquire the skills and education for better paying jobs or possible increase in wages thereby improving the quality of life.

Source: Labor Force Surveys and 2001 Population Census.
Notes:
Economically active population = Labour Force Population (total of employed and unemployed)

Population 15+ = Economically active + Inactive population
Inactive population $\boldsymbol{=}$ Persons who are not in the labour force
Age-specific Labour Force Participation Rate is defined as economically active
population of speciafic age group divided by total population of the corresponding
age group, times 100

COMMENTS: The population recorded in the 1997 and 1999 Labor Force
Surveys were estimates before the 2001 Population and Housing Census.
However these estimates were revised (based on the 2001 Population
and Housing Census) in the Population and Family Indicators.

Notes:
Labour Force Population = Total Employed + Total
Unemployed population (for the last week)

Age-specific Umemployemnt rate is defined as total
unemployed of the specific age group divided by total labour
Force population of the corresponding age group, times 100.

## Analysis of Selected Indicators from a Gender Perspective

The composition of Dominica's population is almost comparable in terms of male ( $50.3 \%$ ) to female ( $49.7 \%$ ). This suggests the significance of the full integration of men and women in all processes and products to ensure overall development. Consequently processes and plans must be informed by effective analysis that assess differences in the situation of women and men, and the differential impact of policies and programmes on both groups. In so doing imbalances will be removed to ensure equity.

## 1) Women Headed Households in Dominica

According to the 2001 Population and Housing Census female-headed households recorded 36.9 percent, reflecting a similar percentage with the 1991 Census (Table1. 5 Population and Family Indicator). The average number of persons per household is 3.1 percent with 3.3 percent of households composing of eight persons or more. This includes 311 or 42.5 percent of women headed households and 421 male headed households. A higher number of women than men are widowed (at a ratio of 3:1) and at an earlier age ( 201 women were widows before attaining sixty years of age compared to only 44 widowers at that same age). This group of women may continue to provide for themselves or may largely depend on family, public support or remittances particularly in the case of no pension earnings.

## 2) HIV/AIDS and Gender Implications

HIV/AIDS remains a major area of concern and seemingly more prevalent among males. Although a consistent decrease in trend in terms of teen pregnancy have been recorded, a relatively high number of teen pregnancies, 16.0 percent, was registered for the year 2003. This is a cause for concern as it indicates unprotected sexual activity among youths with implications for the spread of HIV/AIDS. In terms of treatment for HIV/AIDS, affordability and accessibility need to be sustained as well as the integration of a gender perspective in planning and programming. Education and sensitization on this issue need to incorporate a gender focus. For example, HIV/AIDS is mainly a lifestyle disease. A common articulated concern by health officials is the fact that less men access health services. On the other hand, since women mainly take up care giving roles, the burden of
caring for those affected usually falls squarely on their shoulders. Therefore women as equally as men need increase education and appropriate support in dealing with HIV/ AIDS.

## 3) Gender and the Correlates of Poverty

Income poverty remains a serious problem in Dominica. The 2002 Survey of Living Conditions indicated that about $29 \%$ of households and $39 \%$ of the population as living below or just about the poverty line and $15 \%$ is indigent. The June 2003 Country Poverty Report showed no significant difference in the incidence of poverty among individual females and males. However, a 2003 Social Protection Review Report suggests a considerable variation in poverty rates across socio-economic groups and geographic areas. This is supported by a recent poverty mapping which recorded higher concentration of poverty in the rural areas which may be related to the decline in rural agricultural occupations. The review of social protection identified key contributors to poverty as unemployment/under employment, low wages or returns to self-employment, low education levels.

Poverty and Single Female Headed Households: The Social Protection Review recorded 34.0 percent of poor households are headed by single female-headed households, while $45 \%$ of all poor people live in female-headed households.

Poverty and Unemployment/Underemployment: The Social Protection Review recorded the gender gap in unemployment was particularly high among the poor, registering $49 \%$ poor women and $33 \%$ poor men as unemployed. However a decrease in the unemployment rate was noted for both sexes, over the Labor Force Survey periods 1997, 1999 and the 2001 Population and Housing Census (Table 1.2 Employment/Labor Force Indicator). Participation rate in the labor force recorded a higher percentage for men (for all age groups) throughout the same period. Labor force participation rate of both sexes have decreased over the years with a sharper decrease for women Table 1.(Employment /Labor Force Indicators). The productive sectors of construction and agriculture however are still largely dominated by males.

## Education:

Women are increasingly taking up opportunities for tertiary education accounting for a higher percentage (than men) while the vocational training reflects the opposite (Table 1.8 and 1.9 Education Indicator).The number of drop outs though steadily decreasing is higher for males, indicating a possible risk factor for level of employment, and vulnerability.

On the other hand, a slight deviation is reflected in what may have been traditionally considered to be female or male dominated fields. Student enrolment at technical fields of the college suggested a gradual increase in female participation more specifically in Building Construction. Of the courses offered, building construction recorded a significant change with women accounting for about 32.0 percent particularly from the 2000/2001 academic year. Recently women students seem to be entering the areas of electricals recording about 28.0 percent of student in that field.

Government granted scholarships registers comparability in male to female students. However, females account for lower enrolment in disciplines of architecture, and civil engineering (Table 1.11 Education Indicator).Gender imbalance in academic or vocational courses is generally reflected in the labor force continuing the sexual division of labor with implications for level of income. There is need to prepare and ensure that both men and women equally avail themselves of opportunities in the various fields.

## 5) Politics/Decision Making

There has been significant growth in the number of women in senior management in both the private and public sector as a result of the increased number of women obtaining tertiary level education. Indeed there is an upward trend in the number of women professionals in the public and private sectors. This improvement however is not yet adequately reflected in positions that may influence or determine policies in the decision making processes at the highest level.

The position of Permanent Secretary, one of the highest positions in the public service remains male dominant (Table 1.4 Decision-Making Indicator). In general female representation accounted for 26.6 percent in govemment senior level positions in 2004 Although there has been increased participation of women in politics it is mainly at the local government level. There is still much to be done to activate women's participation at Central Government Level and representation at the higher decision-making level. Research shows that where women have been successful in the political office (local governance) it positively influences others and attracts more women participation and leadership (Report on Situational Analysis of Women and Men, 2004)

Women's participation in the highest level of policymaking - central governance, reflects little change in trend. In fact after 1995, women's participation at that level has seriously dwindled.
$>$ A brief outline is as follows:

- Two (2) women out of thirty (30) members of parliament
o One woman junior minister out of a total of thirteen (13) ministers in Cabinet
o Two female senators out of nine (9); one on the government side and the other on the opposition
o One elected woman in parliament.
It is worth exploring the reasons why women do not register as candidates for public office. Women involvement would definitely contribute to policy development/decision making processes in the country.

## Recommendations

- Qualified females to be assertive in positioning themselves for senior level positions in the public sector
- Train women in leadership and policy formulation: Gender sensitization and training of persons in key positions to influence policy and skills in gender analysis ensuring that policies and programmes benefit all social groups
- Need to encourage /facilitate more women participation at the international level e.g. ambassadorial and international representation - one way to set foundation for increased involvement in decision making
- Sensitize public support for women in politics, present women as candidates for general election and women to be more engaged in dialogue on global issues
- Represent gender issues at national level and promote political debate around these issues
- Encourage women's arms of political parties to lobby and groom women for public office
- Encourage young women to pursue political careers
- Education that assist in changing the culture of party politics to bring focus on issues rather than personalities
- Review of the political processes e.g. to reduce risk of job security when men and women decide to serve their country at the highest level; (it seems they are being penalized for that decision).
- Adopt the Commonwealth Secretariat proposal to work at achieving the target 30\% representation by 2015 and uphold the Millennium Development Goals.

## Issues of crime and violence

Young men are seemingly the main perpetrators of crimes resulting in a predominantly male population at the State Prison (Table 1.2b. Crime Indicator). Crime and violence may be related to other economic and social factors.

## Recommendations

There is need for:

- A Systematic, Multi-sectoral and integrated approach to addressing this problem.
- Research to better understand the underlying factors for violence and crimes
- Continued massive campaign on violence against women and children.
- Bring some focus on men and masculinities in development processes.
- Create awareness of and possible solutions to the gendered relationship to crime and violence

## Conclusions

There are a number of issues which needs attention through increasingly gender friendly policies and incorporation of a gender perspective in programmes and plans nationally and across sectors.

In terms of education though a decreasing trend is being observed, the drop out and repetition rates raises concerns about the underlying causes. One important consideration may be the difference in addressing stages of the development of boys and girls and appropriate approaches.

The foregoing issues are not new but the quantitative data confirms a number of known disadvantaged situations of women in particular. Qualitative data from a number of consultations conducted by the Women's Bureau to support this analysis are available. Through these consultations a number of recommendations and solutions (which can be referred to) have been proposed as articulated in reports at the Women's Bureau to include the:

- CEDAW Report
- Situation Analysis of Women and Men In Dominica, 2004
- Report on Meeting with Policy Makers
- A number of reports on Beijing+5 to affiliated agencies
